# 1 DUT - INFORMAZIONI GENERALI
*DUT - GENERAL PRODUCT INFORMATION*

The DUT (Device Under Test), named **COMPACT 32 500 M J1900 ACL MD SCL** is a variable message panel based on TFT technology used for video-information in railways applications.

*DUT – COMPACT 32 500 M J1900 ACL MD SCL*

*DUT – Product identification label*

## 2 NORMATIVE DI RIFERIMENTO
*REFERENCE NORMATIVE*

All the tests are managed according the European standard **EN 50121-4**: *Railway applications - Electromagnetic compatibility - Part 4: Emission and immunity of the signalling and telecommunications apparatus.*

## 3 PROCEDURA DI TEST DI RIFERIMENTO
*REFERENCE TEST PROCEDURE*

The test was performed following the Aesys internal reference procedure named *IL 22017 Electrostatic discharge.*

## 4 STRUMENTAZIONE UTILIZZATA PER IL TEST
*USED TEST MEASUREMENT INSTRUMENTS*

| Description | Model | Manufacturer | Serial n° | Calibration n° | Calibration date |
|---|---|---|---|---|---|
| Electrostatic discharges generator | ESD 3000 | EMC Partner | 245 | ISO 02342/17 | 21/03/2017 |

## 5 PARAMETRI DI TEST
*TEST PARAMETERS*

The test method is compliant to the requirements of standard **EN61000-4-2:** *Testing and measurement techniques – Electrostatic discharge immunity test*

**Test setup:** A ground reference plane copper with 0.5mm thickness, is positioned on the laboratory floor.

**Test levels:**
Contact discharges: ± 6kV
Air discharges: ± 8kV

**Interval between successive discharge:** 5s

**Environmental conditions:**
Temperature range: 15°C to 35°C
Relative humidity: 25 to 75%
Pressure: 860 to 1060hPa

**Test measurements uncertainty:**
Contact discharge: ± 0.15kV
Air discharge: ± 0.20kV

The measurement uncertainties stated in this document are estimated as extended uncertainty obtained multiplying the standard uncertainty by the coverage factor *k* corresponding to a confidence level of about 95%.

# 6 REGISTRAZIONE TEST
*TEST RECORDING*

## 6.1 Impostazione test
*Test setup*

| Test | Performance criteria | Result | Verdict |
|---|---|---|---|
| Environmental temperature | Between +15°C and +35°C | +24.3°C | **Passed** |
| Relative humidity | Between 25% and 75% | 27% | **Passed** |
| Pressure | Between 860 and 1060hPa | 1020hPa | **Passed** |
| Functionality | Correct operation and data communications | Dynamic image always displayed<br>Correct data communication | **Passed** |

Several electrostatic discharges are applied to the envelope port as established by the standard **EN 50121-4**.

The discharges are applied directly on conductive and accessible parts of the DUT by pressing the tip of the ESD generator.
The air discharges are applied to non-conductive parts of the DUT approaching it to those parts.
It is performed 5 discharges with positive polarity and 5 discharges with negative polarity.

The discharges have the following characteristics:

- ± 6kV contact discharge;
- ± 8kV air discharge.

The test results passed if it meets the criteria for performance evaluation B as specified by the normative **EN61000-4-2**.

- Class B: Degradation of the operation is accepted only during the test.
